METHOD AND APPARATUS FOR COMPLEMENTING USER ENTRIES ASSOCIATED WITH EVENTS OF INTEREST THROUGH CONTEXT

Abstract

5   Data validation techniques are provided. For example, such techniques complement user entries associated with events of interest through context. In one aspect of the invention, a technique for processing one or more user entries associated with one or more events of interest includes the following steps/operations. Context associated with the one or more events of interest is obtained. At least a portion of the obtained

10   context is associated with one or more user entries representing events of interest. At least a portion of the one or more user entries is evaluated, responsive to at least a portion of the context. An indication of the one or more events of interest is provided, responsive to the evaluation.
